

# SPECIAL PROMOTION

## JOIN TODAY'S WEB3 FIGHT AGAINST CLIMATE CHANGE

Sponsor 1 hectare of our forest to offset your carbon footprint, help conserve biodiversity & drive regenerative entrepreneurship.

Each of our NFTs is backed by carbon credits and is a pay-to-preserve biodiversity impact certificate that can multiply, recycle and compound your ESG sponsorship.

(626) 205 - 1918

info@carboncollectibleNFTs.com

**Each NFT is a carbon credit-backed biodiversity impact certificate that sponsors ecosystem preservation and disincentivizes deforestation.**

## 1.0 Special Promotion

### Our Special Promotion:

Our genesis NFT collection of carbon credit-backed, “pay-to-preserve”, biodiversity impact certificates empowers you to sponsor ESG co-benefits in low-income forest communities.

### Your Rights:

Each of our NFTs conveys virtual rights to one hectare of biodiversity in a forest. This also includes 5 carbon credits per year, for 5 years, but does not include any physical rights to the land, trees or biodiversity. We also grant you rights to our NFT art under creative commons license CC BY-SA 4.0. Your virtual rights cover metaverse and gaming applications.

### Your Co-Benefits:

We pay a fee to each forest owner to fund forest management activities and their other committed co-benefits. We use 50% of our net margin to fund sustainable, and profitable, social impact projects through our social innovation studio. This form of regenerative entrepreneurship multiplies, recycles and compounds your sponsorship. We aspire to convert \$1 of your ESG sponsorship into \$1 of entrepreneurship, which funds \$1 of environmental (E) impact, \$1 of social impact and returns \$1 to the social innovation governance (G) fund. Your ESG impact therefore includes forest conservation, environment regeneration and regenerative entrepreneurship - all designed to make a profit with purpose.

### Your Benefits:

Our NFTs measure & report your impact on biodiversity. Your NFT is therefore a biodiversity impact certificate that accredits you as a leader in environmental, social and governance impact. It tracks and reports your ongoing contribution to the “fight against climate change”,

### Our Community:

Your NFT grants you membership of our stakeholder community, who helps decide which local companies to fund and also contributes to the success of the portfolio companies.

### Your Impact:

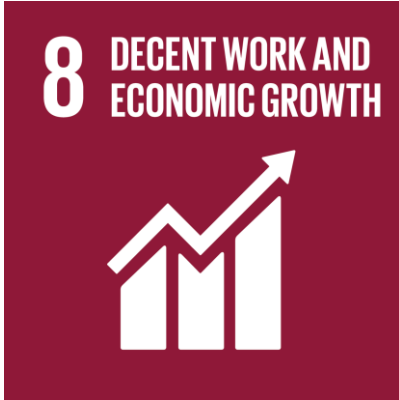

Our NFTs can accelerate your social impact journey. First, minimize your CO<sub>2</sub> emissions then:

1. Use our carbon credit-backed NFTs to offset your remaining carbon footprint.
2. We then use your ESG sponsorship to help eliminate poverty-driven deforestation:
  - a. We assign, to each NFT, virtual rights to the biodiversity in one hectare of a forest. We use data from a 3<sup>rd</sup> party oracle to estimate carbon removal per hectare then assign the corresponding number of carbon credits to each hectare. Each NFT contributes 1-hectare of biodiverse value to its assigned carbon credits.
  - b. Your NFT sponsorship also funds sustainable and profitable local companies who use Web3 to reimagine solutions to legacy challenges. These companies create alternative livelihoods, regenerate each forest & replenishes the social impact fund. Buy an ESG impact NFT then contribute some of your time to a ReFi social innovation studio.

**Note:** The carbon footprint of the average American citizen is 10 to 30 tons of net carbon dioxide emitted/year – 2 to 6 of our NFTs can help you offset your carbon footprint.

## 2.0 UN SDGs

Our business model impacts multiple United Nations Sustainable Development Goals.

Our social innovation studio funds entrepreneurship & economic growth

Our Web3 hybrid smart contract accesses climate data from a 3<sup>rd</sup> party oracle

Our goal is to add equity and inclusion to climate finance

We provide sustainable & profitable solutions to local legacy challenges

Our geolocated dynamic NFTs are ESG impact certificates

We increase the value of tropical forests to their local community
